Branch: REC

Department: I AIML AD

Batch: 2028

Degree: B.E - AI & ML

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

## **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

#### Sample Test Case

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    #include <stdio.h>
    #define EMPTY -1
    void initializeTable(int table \( \), int size \( \) {
      for (int i = 0; i < size; i++) {
        table[i] = EMPTY;
int linearProbe(int table[], int size, int num) {
```

```
int index = num % size;
int originalIndex = index;
  while (table[index] != EMPTY) {
    index = (index + 1) \% size;
    if (index == originalIndex) {
       return -1;
  return index;
}
void insertIntoHashTable(int table[], int size, int arr[], int n) {
  for (int i = 0; i < n; i++) {
   int index = linearProbe(table, size, arr[i]);
    if (index != -1) {
       table[index] = arr[i];
  }
int searchInHashTable(int table[], int size, int num) {
  int index = num % size;
  int originalIndex = index;
  while (table[index] != EMPTY) {
    if (table[index] == num) {
       return 1;
    index = (index + 1) % size;
    if (index == originalIndex) {
       break;
  return 0;
int main() {
  int n, table_size;
  scanf("%d %d", &n, &table_size);
                                                    241501190
  int arr[MAX], table[MAX];
for (int i = 0; i < n; i++)
    scanf("%d", &arr[i]);
```
